

**Table B.52.9 – Current-carrying capacities in amperes  
for installation methods E, F and G of Table B.52.1 –  
Mineral insulation, copper conductors and sheath –  
Bare cable not exposed to touch (see note 2) –  
Metallic sheath temperature: 105 °C, reference ambient temperature: 30 °C**

| Nominal<br>cross-sectional<br>area of<br>conductor<br>mm <sup>2</sup>                                       | Number and arrangement of cables for methods E, F and G of Table B.52.1           |                                                                                   |                                                                                   |                                                                                     |                                                                                     |
